Profile

Learning Experience Designer with 4 years designing, testing and scaling self-paced digital learning experiences, primarily for US learners. Background spans instructional design, course and learning-path design, learner research, localization and product ownership. Improved a core learning methodology that increased completion from 10% to 21% and was adopted at scale, with hands-on experience using AI and low-code tools to prototype interactive and short-form learning formats.

Core skills

Learning Experience Design · Instructional Design · Learning Program, Course & Learning Path Design · Learning Outcomes & Progression · Learner Research · Learning Analytics · Localization · AI-Enabled Content Prototyping

Experience

Learnfield GmbH · Berlin, Germany

April 2022 - Present

Product Owner | Learning Experience & Content

August 2023 - Present

- Own learning experience and content strategy across two digital learning products, using learner research, behavioural data and learning outcomes to diagnose where learners struggle and redesign learning flows, formats and content.
- More than doubled completion from 10% to 21% by validating a progressive learning format that breaks complex skills into structured guided steps; top satisfaction ratings increased by 14 percentage points and Day 1 retention rose from 55% to 67%, leading to the format being commissioned at scale.
- Prototype learning experiences and scalable content formats with Claude and AI/low-code tools, including interactive practice tools, learning prototypes, animations and short-form educational video concepts, testing ideas before committing significant engineering or production capacity.
- Adapt learning content and experiences for international and partner contexts, translating external requirements, learner needs and operational constraints into product and content decisions while coordinating localization, quality controls and release readiness.
- Combine learner interviews, surveys, usability testing and behavioural analytics to evaluate learning experiences and prioritize improvements; one research cycle found that roughly one-third of learners supplemented the product with external video content, directly informing the engagement roadmap.
- Reduced end-to-end learning-content delivery time by 70% by redesigning production and release workflows with content and engineering teams, enabling faster development and iteration.

Education Content Manager & License Manager

October 2022 - July 2023

- Owned the end-to-end development and release of digital learning content, from learning needs and scope through production, localization, QA, launch and post-release evaluation.
- Delivered 260+ learning modules in one quarterly release, expanding the learning-content library by 160%, and coordinated a separate 61-item Japan and Korea release based on locally validated learner needs.
- Designed onboarding and personalization experiences around learner goals, preferences and prior context, defining success measures before launch and using performance data to improve subsequent iterations.

Educational Content Creator

April 2022 - October 2022

- Designed and scripted complete self-paced courses and interactive digital learning experiences for different ability levels, structuring progression, lesson sequencing and practice around learning needs.
- Worked with educators, subject-matter experts and production specialists to refine instructional clarity, pacing, progression and usability across guided exercises and video-based learning.

Education

Master of Arts in Therapy and Educational Sciences · SRH Heidelberg University
