About me

3+ years expanding and scaling B2C subscription web and mobile SaaS experiences that drive activation, onboarding, conversion, engagement and retention.

I specialize in developing **incremental product experiences driven by discovery iterations**, while bridging complex commercial and legal negotiations to expand the product's capabilities and reach.

At Learnfield I translate commercial and user requirements into product strategy with a clear roadmap of user stories and OKRs, expanding our content offer and improving our users' musical learning experience.

Core strengths

- Product vision & strategy for app subscription-based services
- Full product development cycle from discovery to delivery
- Backlog ownership for multiple teams: technical requirements definition, grooming & refinement, stakeholder-to-engineering translation and prioritization
- Partner negotiation on commercial and legal terms, bridging them into product requirements and strategy
- KPI & OKRs definition (user value, business value: activation, conversion, engagement, LTV and retention)
- Agile mindset with experience in Scrum, Kanban and hybrid setups
- AI-augmented PM tooling: integration of agentic AI workflows into daily product development processes

Experience

Learnfield GmbH

2024 - Present

Product Owner • Berlin, Germany

- Owned two parallel product squads (Trala violin app and Skoove piano content team) across Web and App for a subscription-based SaaS platform operating internationally across 7+ languages.
- Led the negotiation that unlocked the Disney Music Group catalogue, enabling the largest Disney piano collection in our competitive landscape.
- Lifted projected revenue per paywall visitor by 28.7% through subscription A/B tests on RevenueCat and Mixpanel, working end-to-end from hypothesis and metric design to ship, read-out and follow-up iteration.
- Optimized the onboarding funnel experience (location-based personalization, questionnaire variants on genre and learning goal), contributing to 14% YoY revenue growth.

- Direct interlocutor with music publishers, licensors and commercial partners on complex technical topics: licensing terms, royalty mechanics, rights clearance, contract negotiation and dispute resolution. Trained by the CEO/CPO in negotiation.
- Translated ambiguous business and commercial requirements into structured epics, user stories and acceptance criteria, with backend- and frontend-ready development tasks anchored to success metrics.
- Coordinated the full cycle of optimizing internal content delivery tools, reducing end-to-end process time by 70%.

Learnfield GmbH

2022 - 2024

Education Content Manager, Skoove (Piano Learning App) • Berlin, Germany

- Owned the full content release cycle end-to-end: ideation, scoping, licensing clearance, localization, marketing handoff and post-launch Mixpanel performance review, across quarterly release cadences shipping up to 260+ songs at a time.
- Drove continuous catalogue expansion for globally available apps, including major regional pushes into Japanese and Korean markets, with localized repertoire validated by local market experts and routed through cleared publishers.
- Built the operational foundation of the company's licensing function: publisher partner pages, publisher-by-publisher content-tactics matrix and rights-ownership workflows now used by Engineering, Content and Marketing.
- Ran monthly engagement reviews and user surveys to prioritize the catalogue, surfacing high-impact repertoire and low-adoption placements that fed into the next content cycle.

Education

SRH Heidelberg University

2020

Master of Arts in Therapy & Education Sciences • Heidelberg, Germany

Languages

- **Spanish:** Native (C2)
- **English:** Fluent (C1/C2), working language
- **German:** Professional working proficiency (B2+), daily use at work
